

The Comprehensive Source For Flight Simulation

Rudy Frasca, Founder & CEO

For over three decades, Frasca International has manufactured an impressive lineup of flight simulation products. Our comprehensive product range includes every level of simulation device available for general aviation, commercial airline and military aviation organizations. This complete "source" ensures that whatever the requirement, Frasca has a simulation product to fit your particular need.

FRASCA
INTERNATIONAL, INC.

General aviation simulator production line.

Frasca International is proud to offer the most comprehensive line of advanced technology simulators available anywhere. Our broad range of high fidelity, value-oriented simulation products was made possible by employing the highest caliber management, engineering and manufacturing staff available.

Unlike many other simulator manufacturers, Frasca can economically provide the right product for any flight training need...general aviation, commercial, helicopter, military and others. This full-

range capability utilizes a "vertical integration" manufacturing process, allowing us to efficiently produce any level of simulator...simple devices to Flight Training Devices (FTD's) and Full Flight Simulators (FFS's).

More than any other simulator manufacturer, Frasca has demonstrated the flexibility to produce reliable, advanced training devices for all modern aircraft types.

Frasca offers a diverse selection of low-to-mid range models for single and twin-engine simulation, including the low-cost 130 Series, the economical 140 Series, on up to the deluxe 240 Series and 242 Turbine. Frasca's standard model simulators come equipped with a full IFR panel and avionics, and detailed customization is available on the more advanced models. Our digital design provides features not typically found in other simulators,

including various aircraft systems faults, user-adjustable performance characteristics and global navigation capabilities.

Helicopter simulation is yet another area of Frasca's expertise.

Starting with the standard production Model 342 for instrument and ab initio training, we offer custom configurations to emulate most helicopter aircraft models. Frasca has previously manufactured helicopter simulators representative of aircraft from Bell, MBB, Sikorsky, Aerospatiale, Hughes and Schweitzer.

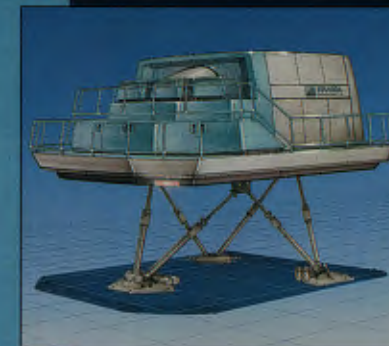

High fidelity Full Flight Simulators and Flight Training Devices incorporating the latest industry technologies are also available from Frasca. Whether it is an FAA certified or equivalent device, Frasca has the staff and experience to provide a reliable product without compromise.

Visual systems are another important part of Frasca International. We offer diverse Frasca-developed

Frasca simulation products have won the praise of the most discriminating users in the world.

visual system options for our simulators which lead the industry in flight training cost-effectiveness. We also supply Frasca simulators with visual systems from other manufacturers when our customers require specific features not available with Frasca Visuals.

For all of your flight training needs, look to the company that pioneered realistic flight simulation at affordable prices — Frasca International!

Frasca is creating tomorrow's flight simulation standards today!

A user-friendly Instructor Operator Station with touch-sensitive controls is available.

Flight Training Devices and Full Flight Simulators under construction in the High Bay.

FRASCA
INTERNATIONAL, INC.

By significantly reducing the training time required in an actual aircraft, Frasca simulators continue to establish new international standards in

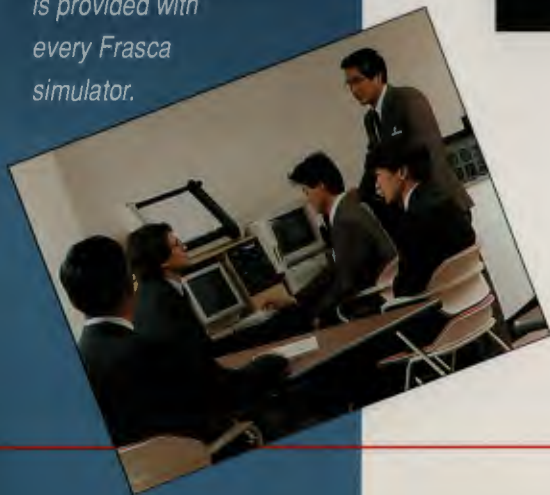

pilot training effectiveness. We've delivered over 1200 flight simulators to more than 60 countries worldwide, with product deliveries incorporating high fidelity sub-systems, such as six-axis motion, digital sound, control loading, visuals, and touch-activated instructor stations. Frasca has a simulator to meet

your needs...from single-engine general aviation models to type-specific twin-engine models for ab initio training; line-oriented flight trainers (LOFT's) for the airlines, to military Full Flight Simulators. In fact, our full range of FTD's and FFS's are designed to meet or exceed the requirements of FAA certification criteria and international equivalents.

With over 35 years in simulator production expertise, Frasca International has the ability to satisfy the requirements of the most demanding flight training programs anywhere!

*More pilots have
trained in a Frasca
than any other
simulator!*

*Dedicated customer
support and training
is provided with
every Frasca
simulator.*
